Your child may have been exposed to:

| Herpes (Cold Sores) | Herpes simplex is a viral infection that may cause sores in the mouth or on the lips and face. The sores are commonly called cold sores. |

If you think your child has Cold Sores:
- Tell your childcare provider or call the school.
- Need to stay home?
  
  **Childcare:**
  - First infection: Yes, as long as young children that drool have active sores. They can return when the sores in the mouth have healed.
  - Recurring infections: No.

  **School:**
  - No.

**Symptoms**

- The first time a child is infected, there may be blister-like sores inside the mouth and on the gums. A child may have a fever and be fussy. The cold sores and fever blisters may occur many times in a person’s life.

If your child is infected for the first time, it may take 2 to 14 days for symptoms to start.

**Spread**

- By having direct contact with saliva, commonly by kissing.
- By touching the fluid from the blisters or sores.

**Contagious Period**

- First infection: up to 2 weeks, sometimes longer.
- Recurring infection: usually 3 to 5 days.

**Call your Healthcare Provider**

- If anyone in your home has symptoms of oral herpes infection.

**Prevention**

- Remind children not to touch the sores.
- Wash hands after touching anything that could be contaminated with secretions from the mouth or the sores. Your child may need help with hand washing.
- Clean and disinfect objects that come in contact with the sores or secretions from the mouth. Use a product that kills germs.
- DO NOT kiss a person with sores on or near the mouth.
- Use a cotton-tipped swab to apply medication.
