Eighteen Evidence-Based Interventions

**REDUCE TOBACCO USE**
- Expand access to evidence-based tobacco cessation treatments, including individual, group, and telephone counseling and FDA-approved cessation medications—in accordance with the 2008 Public Health Service Clinical Practice Guidelines.
- Remove barriers that impede access to covered cessation treatments, such as cost sharing and prior authorization.
- Promote increased utilization of covered treatment benefits by tobacco users.

**PREVENT HEALTHCARE-ASSOCIATED INFECTIONS**
- Require antibiotic stewardship programs in all hospitals and skilled nursing facilities.
- Prevent hemodialysis-related infections through immediate coverage for insertion of permanent dialysis ports.

**CONTROL ASTHMA**
- Promote evidence-based asthma medical management in accordance with the 2007 National Asthma Education and Prevention Program guidelines.
- Promote strategies that improve access and adherence to asthma medications and devices.
- Expand access to intensive self-management education and reduce home asthma triggers for individuals whose asthma is not well-controlled with guidelines-based medical management alone.
- Expand access to home visits by licensed professionals or qualified lay health workers to improve self-management education and reduce home asthma triggers for individuals whose asthma is not well-controlled with guidelines-based medical management and intensive self-management education.

**PREVENT UNINTENDED PREGNANCY**
- Reimburse providers for the full range of contraceptive services (e.g., screening for pregnancy intention; tiered contraception counseling; insertion, removal, replacement, or reinsertion of long-acting reversible contraceptives (LARC) or other contraceptive devices; and follow-up) for women of childbearing age.
- Reimburse providers or health systems for the actual cost of LARC or other contraceptive devices in order to provide the full range of contraceptive methods.
- Reimburse for immediate postpartum insertion of LARC by unbundling payment for LARC from other postpartum services.
- Remove administrative and logistical barriers to LARC (e.g., remove pre-approval requirement or step therapy restriction and manage high acquisition and stocking costs).

**CONTROL AND PREVENT DIABETES**
- Expand access to the National Diabetes Prevention Program, a lifestyle change program for preventing type 2 diabetes.
- Promote screening for abnormal blood glucose in those who are overweight or obese as part of a cardiovascular risk assessment.
