Cumberland County Local Board of Health Minutes

The Cumberland County Local Board of Health met on Thursday March 28, 2019 6:00 PM at the Cumberland County Health Department.

Members Present:
Mike Morgan
Judge John Phelps
Gina Shaye Watson
Doug Williams
Jan Clark
Kristen Branham
Tabatha Shelton
Dr. John G. Stephenson

Members Absent:
Dr. Robert Flowers, Sr.
Dr. Brian Dyer
Gary White
Allison Kerr

Others Present:

Shawn Crabtree Cindy Nettles

Tracy Aaron Jackie Hodges

Sherri Gibson

Judge Phelps, Chairman called the meeting to order.

<u>Approval of Minutes:</u> Minutes from previous meeting were previously mailed to board members to review. Copies also available at meeting to each member present. Doug Williams made a motion to accept the minutes, seconded by Mike Morgan and approved by all board members.

Old Business:

Judge Phelps mentioned the new roof and gutters being installed 3 years ago. The office is still dealing with some leaks at two different places at the back of the building. Joel Byers explained to Judge Phelps it is the wooden boxes that the units are sitting on the top of the building. They are trapping water that in return is causing the leaks into the building. Judge Phelps ask for the permission from the board to contact Jimmy King, who installed the units, about the cost of moving the units from the roof to the ground. Motion made by Jan Clark for Judge Phelps to contact Jimmy King regarding the possible moving of the units, seconded by Doug Williams and approved by all board members.

New Business:

No new business at this time.

Set Tax Rate. Approve Budget: Shawn had packets for each member and he explained and reviewed the tax rate and the budget. He went into detail for the 2019/2020 budget. In this budget he discussed the auto start generators. We currently have 3 counties that will have generators to power the entire building in case of a power outage. We are asking for approval for one that powers only refrigerators, a few computers and lights, etc. He states he feels the board will be fine to leave tax rate at 3.5 cents. After a discussion a motion made by Gina S. Watson to retain tax rate at 3.5 cents, seconded by Doug Williams and approved by all members present. Motion to

approve overall budget which includes the auto start generator made by Doug Williams, seconded by Kristen Branham and approved by board members present.

Members who terms expire 12/31/2019. Members present if you are willing to serve another two-year term new biographical sheet are to be completed and turned back into Cindy Nettles. Members not present, Cindy will contact.

Election of Officers/ Members sitting on District Board of Health: Motion made by Mike Morgan for John Phelps to continue to serve as Chairman of the Board, seconded by Doug Williams. Motion made by Doug Williams for Gina S. Watson to continue to serve as Vice Chairman of the Board, seconded by Mike Morgan. Motion made by Dr. John G. Stephenson for Shawn Crabtree to continue to serve as Secretary of the Board, seconded by Jan Clark and approved by board members present. Doug Williams made a motion for Kristen Branham to continue serve on the district board along with Judge John Phelps, seconded by Mike Morgan and approved by board members present.

Director Comments: Shawn commended Judge Phelps for serving as Chairman of the District Board. States he has served us well and thanked him for his service. State wide health department meeting that aired via YouTube has been archived. If you haven't had a chance to watch it, do so. It has a lot of information as far as the direction of the local health departments. The local health department retirement contribution is currently .50 cents and is going to .87 cents. When implemented could cost our agency 1/4 of our employees. Our district could survive on the max reserve for two years. If it is passed it could delay implementation of 1 year. Judge Phelps states he wants everyone to understand how serious the pension crisis is and how is effects people and staff locally.

Health Education. Jackie Hodges presented some statistics on 2019 Snapshot of Cumberland County data some data has decreased 2%. Teen births have increased in Cumberland County compared to the state average. Health Education is active in the community here in the Health Coalition and the KY ASAP.

Doug Williams. Doug is currently working on a research project through Northern Kentucky University Doctoral Program. The project is for men ages 18-45 on Testicular Cancer, a type of cancer that is 95% curable if caught early. Patients will be from the BF Taylor Clinic and Flowers Rural Health Clinic results and finding will be collected over the course of a year.

Motion made by Gina S. Watson to adjourn meeting, seconded by Jan Clark.

Judge John Phelps, Chairman

Digitally signed by Aban D. Crabtree Date: 2019-03-13 13: 01:03

Shawn Crabtree, Secretary

Product Information

(i) Description

Make morning toast the way you like it, from lightly browned to crispy dark and every shade in between. This toaster oven features exclusive Accu-Timer technology. With Accu-Timer, selecting the preferred shade is easy, simply turn the top knob to Toast and the bottom knob to the desired shade and toasting will begin. When your toast is ready, the toaster will beep and the power will turn off. The convection fan allows hot air to circulate throughout the oven. This results in even baking and browning. Food cooks faster with convection, and you can generally set the oven at a lower temperature.

 The powerful convection fan circulates warm air throughout the oven for fast, even baking

Office of Adolescent Health

Overview Two-Year Teen Pregnancy Prevention (TPP) Grant July,15 2019 - June 30, 2021

Awarded: \$986,000

Lake Cumberland District Health Department was awarded the Phase I Tier 1 projects to replicate programs that have been proven effective through rigorous evaluation to reduce teenage pregnancy, behavioral risk factors underlying teenage pregnancy, or other associated risk factors.

Reducing the Risk (RTR) will be implemented in all 12 high schools across Lake Cumberland

RTR will assist high school students to delay the initiation of sex or increase the use of protection against pregnancy and STD/HIV if they choose to have sex. This research-proven approach addresses skills such as risk assessment, communication, decision making, planning, refusal strategies and delay tactics.

Performance measures

- 95% of sites will implement the programs
- 60% of sexually active participants will report they are more likely to use protection to avoid pregnancy and/ or STD's
- 80% of participants from both programs will report the program was beneficial
- 90% of TOP participants will have eliminated at least 2 risk factors
- 80% of TOP participants report more confidence in handling challenging issues
- Decrease LCDHD teen birth rates by 5%
- Decrease LCDHD STD rates by 5% by practicing abstinence will help them achieve their career goals

Teen Outreach Program

Casey and McCreary Counties

Wyman's Teen Outreach Program® (TOP®) promotes the positive development of adolescents through curriculum-guided, interactive group discussions; positive adult guidance and support; and community service learning.

TOP is delivered by trained adult facilitators across a school year to groups of teens (called "TOP Clubs"). TOP is designed to meet the developmental needs of middle and high school teens and can be implemented in a variety of settings, including in-school, after-school, through community-based organizations or in systems and institutional settings, including residential facilities.

TOP curriculum is focused on key topics related to adolescent health and development, including building social, emotional, and life skills; developing a positive sense of self; and connecting with others.

Family & Youth Services Bureau Sexual

Risk Avoidance Education (SRAE)

Overview of SRAE Program / Making a Difference (MAD) September 30, 2016 through October 1, 2019

Awarded: \$972,151

Lake Cumberland District Health Department was awarded the Sexual Risk Avoidance Education (SRAE) grant from the Family and Youth Services Bureau providing funding to implement Making a Difference (MAD) curriculum from September 30, 2016 through October 1, 2019.

Making the Difference (MAD) Program was implemented in all 14 middle schools across Lake Cumberland

- 13 School Districts
- 7,264 Unduplicated Middle School Students
- 1425 Behavioral Change Presentations
- 81% of the 7,264 adolescents reported that their belief of practicing abstinence will help them achieve their career goals

4% Teen birth rate decrease between 2017 and 2018

Building Resilient Youth Conference - July 25, 2019

ADVERSE CHILDHOOD EXPERIENCES (ACEs)

Adverse Childhood Experiences (ACEs)

Adverse childhood experiences (ACEs) are potentially traumatic events that can have negative, lasting effects on health and well-being including early death¹. These experiences range from physical, emotional, or sexual abuse to parental divorce or the incarceration of a parent or guardian. The original ACE Study was a research study conducted by Kaiser Permanente and the Centers for Disease Control and Prevention. Participants were recruited to the study between 1995 and 1997 and have been in long-term follow up for health outcomes. The study has demonstrated that ACEs are common, often occur together, and are associated with health and social problems as an adult^{2,3}.

Prevalence of ACEs in Kentucky

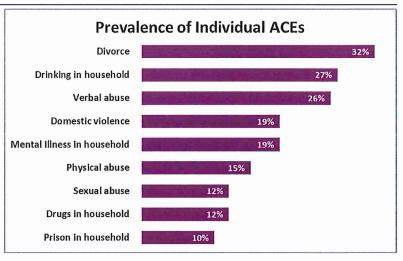

More than half (59%) of Kentucky residents have experienced at least one ACE. Of those that have experienced at least one ACE, 64% have experienced two or more ACEs.

Distribution of ACEs among those with at least one ACE Number of ACEs 18% 18% 21% Number of ACEs 1 2 36% 2 36% 5+

Data Source: Kentucky Behavioral Risk Factor Surveillance (KyBRFS); Year 2015

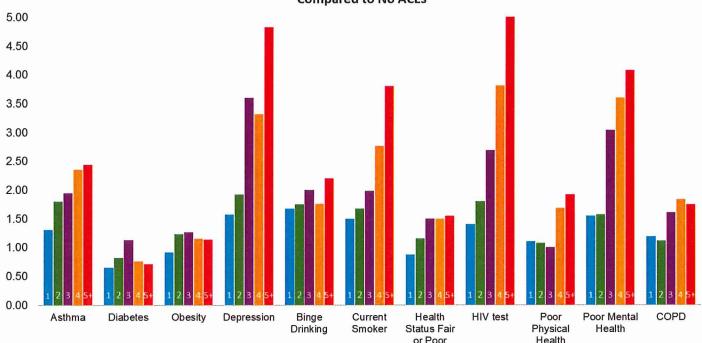

Common ACEs in Kentucky

Data from the Kentucky Behavioral Risk Factor Surveillance (KyBRFS) indicates that several Kentucky adults experienced various types of ACEs. Of those experiencing at least one ACE, 32% experienced divorce in the household, 27% experienced drinking (problem drinker or alcoholism) in the household, and 26% experienced verbal abuse. These data suggest that ACEs are very common in Kentucky and should be addressed during routine health care visits.

Data Source: Kentucky Behavioral Risk Factor Surveillance (KyBRFS); Year 2015

Increased Risk of Condition/Behavior By Number of ACEs Present Compared to No ACEs

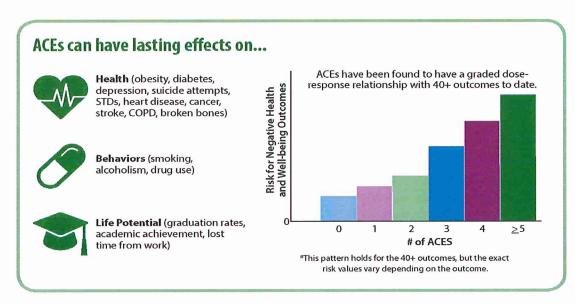

Data Source: Kentucky Behavioral Risk Factor Surveillance (KyBRFS); Year 2015

HIV test=Human Immunodeficiency Virus test COPD=Chronic Obstructive Pulmonary Disease

This data supports addressing ACEs in the health care setting as well as in communities. A better understanding of the adverse events experienced by an individual during childhood could provide insight into their physical and mental health status as an adult. All families experience times of stress, and research demonstrates that children grow and learn best in families who have the supports and skills to deal with those times.

TRUTH ABOUT ACES

WHAT ARE THEY?

HOW PREVALENT ARE ACEs?

The ACE study* revealed the following estimates:

ABUSE

28.3% Physical Abuse Sexual Abuse 20.7% Emotional Abuse 10.6% percentage of study participants

NEGLECT

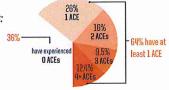

Emotional Neglect 14.8% Physical Neglect

that experienced a specific ACE

HOUSEHOLD DYSFUNCTION

26.9% Household Substance Abuse Parental Divorce 23.3% 19.4% Household Mental Illness 12.7% Mother Treated Violently Incarcerated Household Member

Of 17,000 ACE study participants:

The three types of ACEs include

ABUSE

Physical

Emotional

NEGLECT

HOUSEHOLD DYSFUNCTION

Substance Abuse

Divorce

WHAT IMPACT DO ACEs HAVE?

As the number of ACEs increases, so does the risk for negative health outcomes

4+ ACEs

O ACEs

1 ACE

2 ACEs

3 ACEs

Possible Risk Outcomes: **BEHAVIOR**

Smoking

PHYSICAL & MENTAL HEALTH

Decression

Heart disease

Severe obesity

A Diabetes

IMPROVE DIABETES OUTCOMES

Diabetes Self-Management Education and Support (DSMES): Ongoing process of facilitating the knowledge, skill, and ability necessary for diabetes self-care. Includes activities that assist in implementing and sustaining the behaviors needed to manage diabetes.

60%

of people with diabetes have never received formal diabetes selfmanagement education and support (DSMES).

AADE 16

Everyone with diabetes needs DSMES, but especially at these four critical times:

- 1 At diagnosis
- Annual assessment of education, nutrition and emotional needs
- 3 When new complicating factors influence selfmanagement
- 4 When transitions in care occur

Diabetes education helps your patients make better self-management decisions

Taking Medication

Monitoring

Problem Solving (for hypo/hyperglycemia and sick days)

Reducing Risks (for acute and chronic complications)

Evidence shows diabetes education:

Decreases A1C

Reduces hospital admissions and readmissions

Improves medication adherence

Increases healthful eating patterns and regular activity

Increases selfefficacy and empowerment

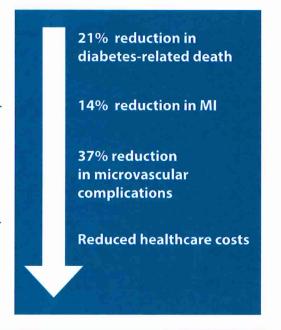

Improves quality of life

Improves coping

More likely to use primary care and preventive services or follow-up on treatment recommendations

A diabetes educator:

- is a licensed health care professional with training and experience pertinent to DSMES
- educates on diabetes
- provides ongoing support in diabetes self-care
- evaluates progress and communicates with providers

How do I refer a patient?

Find diabetes education services in your area in the Kentucky Diabetes Resource Directory: https://prd.chfs.ky.gov/KYDiabetesResources/

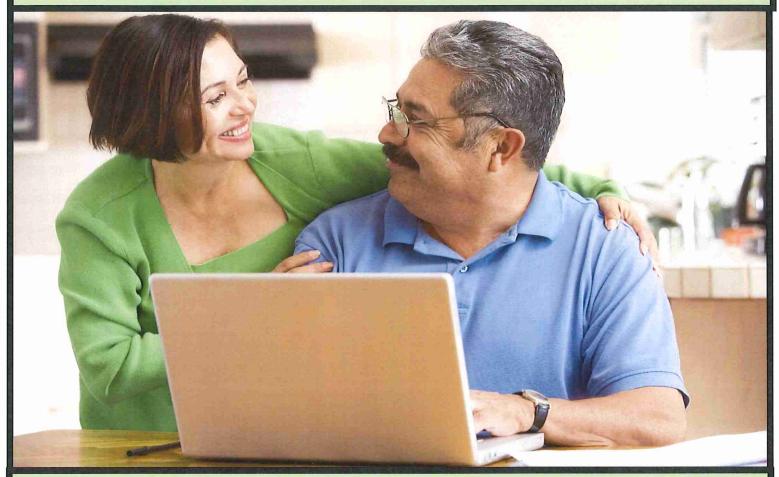

A referral may be required for insurance reimbursement.

Population/Resources 2019-2020

Population

While Kentucky is ranked in the top ten unhealthiest states, our District is below the state average. Kentucky statewide population averages 34% in obesity (US – 29%) (1), 27 % in physical inactivity (US-22%) (1), and 13.8% with diabetes (2). Our district population averages 36.2 % in obesity, 32.1% in physical inactivity (an improvement from 33.6%), and 14.6 % with diabetes.(1) Our district includes ten of Kentucky's 120 counties. Eight of these ten counties are Appalachian counties. Our district is primarily rural, covers 3,720 square miles geographically, and has a population of 209,231.

Compounding the health problems in our area, an average of 7.61 % are uninsured compared to the state average of 6.7%. The state average poverty rate is 16.9%, while in the Lake Cumberland District the average is 23.9%. Language other than English is spoken in 2.63% of homes in our district. Approximately 6.1% (12,728) of our district's residents are veterans. ** We do not have a YMCA or many of the low cost health improvement opportunities offered in larger urban areas.

At present, the Diabetes Education Program is the only source of *free comprehensive* diabetes self-management education in the ten county district. Taylor County does one-on-one education at the local hospital and bills insurance. A pharmacy in Clinton County provides classes and bills insurance as well. Data has been complied and evaluated to identify the greatest need of DSME classes in order to reach population and demands. (See attached table.) We have adjusted the frequency of the classes based on population, incidence of diabetes, available diabetes education in the county, previous history of class attendance, and staffing. We provide classes twice a year in all counties except Pulaski, which has classes 3 times a year.

Resources

The local health department facilities in nine of the ten counties have adequate meeting rooms for DSME classes with the exception being in Casey County. The DSME classes in Casey County are held at the County Extension Office Education Building or the Casey County Public Library free of charge. Three Diabetes Educators (RN, CDE's,) teach DSME classes throughout the district. Interpreters are utilized for one-on-one education when non-English speaking individuals need assistance with diabetes education.

2019 Kentucky Diabetes Fact Sheet

DIABETES: A Public Health Epidemic

Diabetes is COMMON in Kentucky

- From 2000 to 2017, diagnosed diabetes in KY adults has nearly doubled from 6.5% (198,052) to 12.9% (442,500 or 1 in 8)¹. KY ranks 7th highest in the U.S. for diabetes prevalence³. (Nationwide median: 10.5%)
- ♦ An estimated 147,500 adults are living with undiagnosed diabetes based on the national rate².
- In Appalachia, the adult rate for diagnosed diabetes is 17% compared to 11.2% in non-Appalachian counties.
- 3,352 youth had a diabetes diagnosis claim in the Kentucky Employees' Health Plan (278) and Medicaid (3,074)³.

Prevalence of Diagnosed Diabetes by Kentucky Regions

2017 Kentucky Behavioral Risk Factor Survey

Statewide Prevalence: 12.9%

Prevalence of Diagnosed Prediabetes by Kentucky Regions

2017 Kentucky Behavioral Risk Factor Survey

Statewide Prevalence: 10.2%

- Prediabetes occurs when blood sugar levels are higher than normal but not high enough for a diabetes diagnosis. It is a major risk factor for type 2 diabetes.
- As of 2017, 10.2% (288,000) Kentucky adults had diagnosed prediabetes (up from 8.4% in 2015)³.
- ♦ 812,000 adults are estimated to have undiagnosed prediabetes².
- ◆ An estimated 1 in 3 adults (33.9% or 1.1 million) have diagnosed or undiagnosed prediabetes².
- ◆ Gestational diabetes, a risk factor for prediabetes, was present in 5.6% (3,039) of Kentucky live births in 2016, and 10% (2,703) of Medicaid births in 2017³.

Diabetes is SERIOUS in Kentucky

- Diabetes can be associated with complications such as heart disease, stroke, blindness, kidney failure, lower-limb amputation and ketoacidosis. These can reduce length and quality of life.
- In 2016, KY had the 4th highest death rate in the U.S. due to diabetes. This is an increase from 14th in 2014. Diabetes is the 6th leading cause of death by disease in KY and the U.S. It is the 3rd leading cause of death by disease for African Americans in KY (2016).
- KY hospitals had 10,470 inpatient hospital discharges with a primary diagnosis of diabetes (2017).
- 49% (18,359) of hospital visits for cardiovascular disease listed diabetes as a secondary diagnosis (2017).
- KY inpatient hospital discharge data, where diabetes is listed as the primary diagnosis, shows other specified manifestations (includes hypoglycemia) and diabetic ketoacidosis or DKA as the most frequent reasons for hospitalization (2017).
- In 2017, 16,176 Kentuckians had an emergency department visit for diabetes that did not result in full hospitalization. These visits generated billed charges of approximately \$74 million³.
- Kentuckians with diabetes are more likely to have other chronic conditions and risks as shown below.

| Diabetes Status and Co-existing Condition or Risk 2017 Kentucky Behavioral Risk Factor Survey | | | | | | | | | | | |
|--|----------------------|------------------|----------------|--------------------------|---------------------|--------------------|------------|-------|-------|-------|--|

Diabetes is COSTLY in Kentucky

- Nationally, people with diabetes have costs 2.3 times higher than in its absence⁴.
- Diabetes has the 3rd highest average cost for individual KY hospitalizations for common chronic diseases at \$35,493 (2017)³.
- 3rd highest overall cost of several common chronic diseases in the KY Medicaid population (2017).
- Diabetes is one of the most costly chronic conditions for both active employees and early retirees in the Kentucky Employees' Health Plan (KEHP) population, at almost \$174 million in combined medical and prescription drug costs in 2017³.
- Diabetes costs KY \$5.16 billion in total medical costs, lost work and wages (2017)⁴.

Diabetes is MANAGEABLE and in Many Cases PREVENTABLE

- Structured lifestyle change programs such as the National Diabetes Prevention Program have been proven to prevent or delay type 2 diabetes in adults with prediabetes or at high risk for the disease.
- Much of diabetes-related sickness and death can be prevented, delayed or reduced.
- Quality care from health care teams including aggressive treatment to manage A1C, blood pressure and cholesterol and promote smoking cessation is critical to reduce risks for diabetes-related complications.
- Diabetes self-management education and support, appropriate self-care and other risk reduction and behavior change strategies are also critical to achieve diabetes control and avoid complications.

The tables below show gaps that exist between current and desired clinical and self-care practices.

| Reported Diabetes Ca Kentucky Behavioral Risk Facto | | | | | s | |
|---|-------------------------------|-------------------------------|-------------------------------|-------------------------------|-------------------------------|---------------------------|

What Can You Do?

You can **PREVENT** or **DELAY** type 2 diabetes

Find out if you have prediabetes – See your health care provider to get your blood sugar tested

Attend a National Diabetes Prevention Program (DPP)

Make healthy food choices

Be more active

Lose weight if needed

Learn more at <u>www.cdc.gov/diabetes/prevention</u> or speak with your doctor

You can **MANAGE** diabetes and reduce risk for complications

Attend a selfmanagement education and support program

Plan meals and make healthy food choices

Stay active

Take your medications

Monitor your blood sugar and other recommended care

Quit smoking

Learn more at

https://www.cdc.gov/diabetes/ndep or speak

To find diabetes prevention or self-management education and support programs in your area, look on the Kentucky Diabetes Resource Directory at https://prdweb.chfs.ky.gov/KYDiabetesResources/

Appendix E

Education Fact Sheet related to Testicular Self-Exam and Testicular Cancer for Men age 18-45 in a Rural Health Setting by Douglas Williams doctoral student Northern Kentucky University DNP

References for all facts are listed as AA, A, B, C, D, E, F, G, H, I, J, K, L and can be found at the end.

- 1. Testicular cancer is the number one cancer in men ages 18-45 (reference D).
- 2. Testicular cancer is highly curable if caught early (reference B).
- 3. Monthly testicular self-exams are very important in early detection and survival rates (reference F).
- 4. Abnormal testicular exam signs include: changes in one testicle from the other, hard lump or nodule (this is the most common sign), edema (swelling) with or without pain, dull pain in scrotum, heaviness in the scrotum (skin sack below testicles), enlarged or tenderness of breast (reference C).
- 5. Testicular cancer caught early, in stage one survival rate is 95% (reference E).
- 6. Testicular self-exam and yearly physicals are a vital part of health wellness, prevention, and screenings, (reference G).
- 7. The cost of yearly screening office visits varies 75 to 150, with most insurance cover at 100%. -cost in financial measure of missing one testicular cancer early \$51,592 (reference A).
- 8. Testicular cancer caught in later stages; the survival rate drops to 74% (reference A).

- 9. Testicular cancer can occur in one or both testicles (reference B).
- 10. Increased risk for testicular cancer includes a father or brother who had testicular cancer, a history of an undescended testicle (cryptorchid testis), abnormal shape testicle, or genetic condition of Klinefelter's syndrome (reference B).
- 11. How to perform a testicular self-exam (reference B).
 - -right after a shower is the best time
 - -check testicles one at a time
 - -cup the scrotum with one hand, does it feel normal? (very important to establish a monthly routine of testicular self-exams to be able to tell normal from abnormalities)
 -place your index and middle finger under the testicle with the thumb on top, roll testicle
 -feel for lumps and repeat the other testicle
 - -feel the testis and the epididymis(soft tissue, tube-like at top or behind of testicle) for swelling or tenderness
 - -the average normal testis is the size of a golf ball, smooth, round and firm to the touch, and it is normal for one testicle to be slightly larger than the other

Any of the above findings or concerns follow up with your care provider (MD, APRN)at once
