

GREEN COUNTY

2014 Community Health Assessment

A Healthy **Today** for a Brighter **Tomorrow.**

Shawn Crabtree MSSW, MPA Director Lake Cumberland District Health Department

An important message from the Director

Judging by quality and longevity of life, compared to other developed countries, the United States is one of the unhealthiest countries in the world. By almost any health indicator one cares to consider, Kentucky is one of the most unhealthy states in America. And, when reviewing our region's Health Report Card, Lake Cumberland scores a "D" in almost every health category. Basically, Lake Cumberland is one of the unhealthiest places in the developed world.

This is something for which we should all be appalled. Furthermore, we should all be motivated to work together to achieve something better. Bringing together our community partners to consider our health status and to develop plans for area-wide improvements is vital in changing our dismal statistics. Hopefully we can all work together to achieve "a healthy today, for a brighter tomorrow".

A Healthy Today for a Brighter Tomorrow.

Health Policy and Promotion Community Health Assessment

The Lake Cumberland District Health Department (LCDHD) is located in rural south central Kentucky. The LCDHD is comprised of ten counties: Adair, Casey, Clinton, Cumberland, Green, McCreary, Pulaski, Russell, Taylor and Wayne. The District covers around 3,613 square miles with a population of approximately 204,000 (US Census 2013 estimates). As one travels through our District they will notice an abundance of beautiful scenic opportunities along with a National and several State Parks. Nonetheless, the natural beauty of our rural communities and open countryside comes with many health challenges.

The Lake Cumberland District Health Department Vision:

To be a leader in preventive health care, health education, and environmental monitoring in collaboration with the public and private sectors. We will show compassion and respect as we strive to improve the health of our communities.

Green County is located in south central Kentucky. Greensburg, is the County Seat. The county is named for Revolutionary War hero General Nathanael Greene, but the reason why the final E is missing is unknown. Green County has a population of 11,180.

Three courthouses have served Green County. In 1804, a brick building replaced an earlier structure, and while no longer operational, it stands in the Downtown Greensburg Historic District as the oldest courthouse building in the commonwealth. The present courthouse dates from 1931.

Green County Vision Statement:

All citizens united to provide a healthier tomorrow by focusing on one another to promote better lifestyle choices, education, resources and a safe environment for all who live, work and play in Green County.

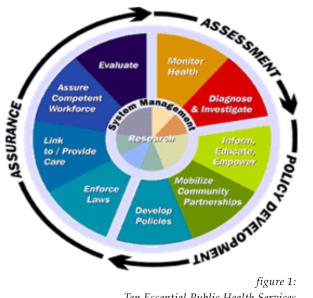

County Health Rankings data ranks Green County's Health Outcome:

32 out of 120 counties

Mobilizing for Action through Planning and Partnerships (MAPP)

Mobilizing Action through Partnership and Planning (MAPP) is a shift in how we think about strategic public planning. It shifts from operational strategic planning to focus on the community and the entire public health system. Mobilizing for Action through Planning and Partnership (MAPP) is a strategic tool that helps communities improve health and quality of life through community-wide strategic planning. The MAPP tool was developed by the National Association of County and City Health Officials (NACCHO) in cooperation with the U.S. Centers for Disease Control and Prevention's (CDC) Public Health Practice Program Office. Through MAPP, communities seek to achieve optimal health by identifying and using their resources wisely, accounting for their unique circumstances and needs, and forming effective partnerships for strategic action. MAPP focuses on the creation and strengthening of the local public health system. Local public health systems are defined as all entities that contribute to the delivery of public health services within a community. This system includes all public, private, and voluntary entities.

MAPP utilizes the Ten Essential Public Health Services to define public health activities. The Ten Essential Public Health Services provide a useful framework for determining who is responsible for the community's health and well-being. The services reflect core processes used in public health to promote health and prevent disease.

Ten Essential Public Health Services

- **Ten Essential Public Health Services**
- **1.** Monitor health status to identify and solve community health problems.
- 2. Diagnose and investigate health problems and health hazards in the community.
- **3.** Inform, educate, and empower people about health issues.
- **4.** Mobilize community partnerships and action to identify and solve health problems.
- **5.** Develop policies and plans that support individual and community health efforts.
- **6.** Enforce laws and regulations that protect health and ensure safety.
- 7. Link people to needed personal health services and assure the provision of health care when otherwise unavailable.
- 8. Assure competent public and personal health care workforce.
- 9. Evaluate effectiveness, accessibility, and quality of personal and population-based health services.
- **10.** Research for new insights and innovative solutions to health problems.

LCDHD's Road MAPP to Health Improvment

The Lake Cumberland District Health Department, Health Policy and Promotion Department has been facilitating Mobilizing Action through Partnerships and Planning (MAPP), over the past two years. MAPP is a framework to help communities apply strategic thinking to prioritize public health issues and identify resources to address them. This interactive process will improve the efficiency, effectiveness, and ultimately the performance of local public health systems. Our goal is to bring the local public health systems together, through community wide-strategic planning, to create a healthier community.

The Green County Community Health Assessment Booklet, provides statistical information, community input and environmental forces that are essential in determining the health status, behaviors and needs of the residents of Green County.

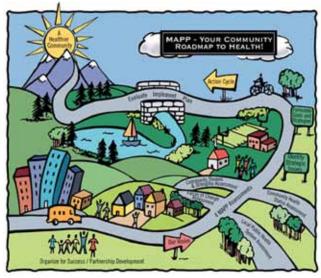

figure 2: Community Roadmap

The process is shown moving along a road that leads to a healthier community. The MAPP process is initiated when the local public health systems organize themselves, recruit participants, and prepare to implement MAPP. The second phase, Visioning, provides a framework for pursuing long range community goals.

OUR GOAL: To bring the local public health systems together to create a healthier community through community-wide strategic planning

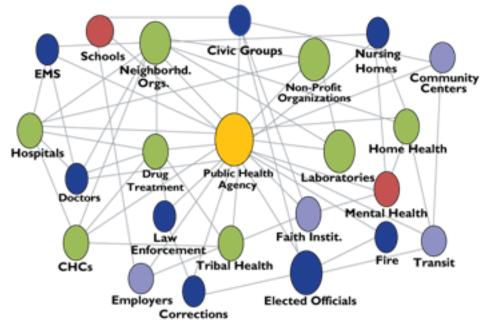

figure 3: Local Public Health System

Green County Community Health Assessment Information

Green County Health and Wellness Coalition has compiled four assessments which make up the Green County Community Health Assessment Booklet. These four assessments assist in creating a picture of residents of the county with health strengths and opportunities. These assessments provided insight on the gaps between current circumstances, provided information to use to identify the strategic issues, and served as the source of information from which our strategic issues, strategies and goals are built.

The four assessments conducted were:

- **1. National Public Health Performance Standards Program** (NPHPSP): measures the capacity of the local public health system to conduct essential public health services.
- 2. Community Themes and Strengths: a community health and safety survey that provides an in-depth look at the health related behaviors of the many different segments of the communities.
- **3. Community Health Status**: statistical information gathered from various sources to provide indicators of current health status in the community.
- **4. Forces of Change Assessment**: takes into account external forces of change, i.e. social, environmental, governmental and economic changes that have an impact on health services.

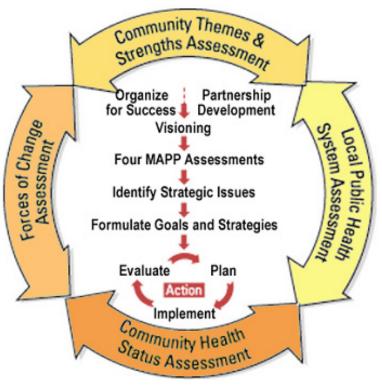

figure 4: MAPP Model

In the MAPP model, the phases of the MAPP process are shown in the center of the model, while the four MAPP Assessments - the key content areas that drive the process - are shown in four outer arrows.

Strategic Plan for Community Improvement

Supported by the Lake Cumberland District Health Department, the MAPP process for the Green County Health and Wellness Coalition began on September 26, 2012. The coalition has completed the four MAPP assessments: Community Themes and Strengths, Local Public Health System Assessment, Community Health Status Assessment and Forces of Change Assessment. These assessments provided insight on the gaps between current circumstances, provided information to use to identify the strategic issues, and served as the source of information from which our strategic issues, strategies and goals were built.

Green County Health and Wellness Coalition strives to organize for success through partnership development and began by conducting several visioning sessions. This document presents the findings of the four MAPP assessments collected between August 2010 and April 2013.

All public, private and voluntary organizations, agencies, groups and individuals that have interests in population health improvements are invited to join Green County Health and Wellness Coalition.

Socioeconomic characteristics play an important role in determining the health status of a county. The unemployment rate is 7.9% of our population. The median household income is \$33,573 with 31% of our children living in poverty. Homeownership rates are 75.8%. 21% of the population is without adequate social support. The rate of children living in single parent homes is 34%.

Behavior risk factors directly impact the individual and community's overall health status. There is a strong correlation between behavior risk factors and mortality rates. Adult obesity in Green County is 30% and 38% of the population are physically inactive. The CDC estimated in 2012 more than one third of adolescents and teens were overweight or obese. According to Kentucky Health Facts, data indicates that 31% of adults in Green County smoke.

Humans interact with the environment constantly. These interactions affect quality of life, years of healthy life lived, and health disparities. The World Health Organization (WHO) defines environment, as it relates to health, as "all the physical, chemical, and biological factors external to a person, and all the related behaviors." Environmental health consists of preventing or controlling disease, injury, and disability related to the interactions between people and their environment. (Healthy People, 2020)

Communicable diseases occur only when the agent comes into contact with a host in a suitable environment. Prevention and control efforts for communicable diseases may be directed to any of these three elements. Communicable diseases affect both individuals and communities, so control efforts may be directed at both. Antibiotics effectively treats most communicable diseases. A simple way to prevent the occurrence of communicable diseases is to eliminate the infectious agent through, for example, cooking food, washing hands, and sterilizing surgical instruments between each use. Assuring the safety of drinking water through filtration and chlorination. Treating sewage appropriately are other important means of preventing the spread of communicable diseases.

Improving the well-being of mothers, infants, and children is an important public health goal for the Lake Cumberland District. Their well-being determines the health of the next generation and can help predict future public health challenges for families, communities, and the health care system. The objectives of the Maternal, Infant, and Child Health topic area address a wide range of conditions, health behaviors, and health systems indicators that affect the health, wellness, and quality of life of women, children, and families. (Healthy People, 2020)

Social and Mental factors can indirectly and directly influence the overall health status of a person and the community. Abuse, substance abuse, neglect and violence impact the mental and physical status of individuals and communities.

Mental health is a state of successful performance of mental function, resulting in productive activities, fulfilling relationships with other people, and the ability to adapt to change and to cope with challenges. Mental health is essential to personal well-being, family and interpersonal relationships, and the ability to contribute to community or society.

Forces of Change Assessment

The Forces of Change Assessment (FOC) is one of four assessments conducted as part of the Mobilizing for Action through Planning and Partnerships (MAPP) community health strategic planning initiative. This assessment focuses on identifying the trends, factors, and events that are likely to influence community health and quality of life, or impact the work of the local public health system.

The FOC Assessment was performed by community health stakeholders and volunteers. A brainstorming session was conducted on December 12th, 2012. Participants were charged with answering the following questions: "What is occurring or might occur that affects the health of our community or the local public health system?" and "What specific threats or opportunities are generated by these occurrences?" To address those questions, participants determined the economic, environmental, legal/ethical, political, social, technological, and medical forces that impact how Green County's public health system functions. Members then developed a list of potential opportunities and threats for each identified force.

Participant findings were compiled into the attached comprehensive matrix of key forces and their associated impacts upon the health of Green County. A selection of the results is included below:

- Healthy Food Choices
- Weather/Climate Influences
- Social Dependency
- Teen Activities

Law Enforcement Education

- Geographic Isolation
- Parent Education
- Social Media

The information gathered through the FOC Assessment is an important component of the MAPP comprehensive community assessment process. These findings will be used in conjunction with the results of the other three MAPP assessments to identify key strategic issues and priorities for action by our community.

Forces of Change Assessment

| FORCE | THREATS POSED | OPPORTUNITIES CREATED |
|--|---|---|
| Economic | | |
| Fast Food Restaurants | High obesity rates, more convenient and less expensive | New and healthy restaurants |
| Industry | | Increased health, increased morale, need to be selective |
| Lack of Insurance Coverage (auto, medical, and home) | No proper medical care | |
| Environmental | | |
| Drought – Summer 2012 | Reduced corn crop, increased cost of food supply, less tobacco to be striped, economic effect | |
| Future Natural Disasters | Excess water and debris, lack of drinking water | Community growth and camaraderie, Emergency Preparedness development |
| Cancer Prevalence in Gabe | Poor health, high economic impact | Education for citizens |
| Domestic Violence Shelter | Highly publicized location | |
| Flood – 2010 | | Funding for Fire Department and Safe House |
| Changing Temperatures | Allergies, makes outdoor exercise and recreation challenging | |
| Housing/Shelter | Currently no local homeless shelter | Homeless and safe shelters |
| Geographic Isolation | Lack of new business and industry | Better roadways and travel systems |
| Hurricane Sandy | Less demand at Amazon for overtime and temporary help | |
| Legal/Ethical | | |
| Crimes | No rehabilitation possibilities, repeat offenders | Need more severe punishment (local and state), legislation advocacy |
| Law Enforcement | | Training on current issues |
| Political | | |
| ObamaCare | | Helps with uninsured |
| Congressional Decision Makers | Disconnected from citizens | Senator Givens chairperson of Health and Welfare Committee |
| Marijuana Legalization | Decreased perception of risk, increased perception of acceptability, and increased usage | |
| Smoking Free Legislation | | Fewer local restaurants allow smoking |
| Government Benefits | Enables the unmotivated members of society and promotes social dependency | |

Forces of Change Assessment

| FORCE | THREATS POSED | OPPORTUNITIES CREATED |
|--|--|--|
| Social | | |
| Bullying | | Parent education |
| Few Teen Activities | Lack of exercise | Needs to be more often, offer more variety aside from sport-related events, provide financial assistance |
| Tobacco Use | Increased allergies | Less accepted, current prevention efforts and working |
| Teen Pregnancy | Portrayed as glamorous, encouraged by society and media, increased government assistance | |
| High School Graduation Rates | | One of the highest in the State |
| High Unemployment Rates | | |
| Few Recreational Activities and Facilities | Lack of exercise | |
| Time Management | No time to exercise, work, family obligations | Seminar at Extension Office |
| Technological/Education | | |
| Internet | Increases locally in child pornography, bullying, lack of exercise | |
| Cell Phones | Lack of exercise | |
| Social Media (Facebook, Twitter) | Lack of exercise | Very popular, use to raise awareness, use positive messages |
| Medical | | |
| Screenings | | Jane Todd Crawford Hospital Health Fair, more frequent health fairs with additional screenings |
| Drug Rehabilitation | | Need more available at a free or reduced cost |
| Financial Assistance | | |
| High Obesity Rates | Lethargy | |
| Allergies | Temperature, climate, location | Education, smoke-free laws |

Community Themes and Strengths Assessment

A Quality of Life survey was distributed across Green County during the months of December 2012 through April 2013. The survey was distributed in two formats electronically and paper. There were 717 individuals that participated in the survey. The community health status assessment assists the communities in identifying priority community health and quality of life issues.

What do you think are the three most important "health problems" in Green County?

| Answer Options | % | Respondents |
|---------------------------|-------|-------------|
| Cancers | 53.8% | 380 |
| Alcohol/Drugs | 55.2% | 390 |
| Obesity (children/adults) | 33.9% | 239 |

What do you think are the three most important factors for a "healthy community"?

| Answer Options | % | Respondents |
|-----------------------------|-------|-------------|
| Low Crime/Safe Neighborhood | 44.8% | 316 |
| Good School Systems | 47.2% | 333 |
| Good Jobs/Healthy Economy | 46.6% | 329 |

What do you think are the three most important "risky behaviors" in Green County?

| Answer Options | % | Respondents |
|--------------------|-------|-------------|
| Alcohol/Drug Use | 77.3% | 544 |
| Tobacco Use | 42.9% | 302 |
| Poor Eating Habits | 38.1% | 268 |

See Green County Community Health Surveys on pages 26 - 27 of this booklet.

Local Public Health System Assessment

Green County performed the LPHSA in August 2010. There were approximately 20 people that participated in the assessment. The majority of the organizations that make up the Local Public Health System were present.

The Local Public Health System Assessment Instrument focuses on the local public health system or all entities that contribute to public health services within a community. The local instrument was developed by NACCHO and CDC. The standards are designed around the ten Essential Public Health Services to assure that the standards fully cover the gamut of public health action needed at state and community levels. The standards focus on the overall public health system (all public, private, and voluntary entities that contribute to public health activities within a given area), rather than a single organization. This assures that the contributions of all entities are recognized in assessing the provision of essential public health services. The standards describe an optimal level of performance rather than provide minimum expectations. This assures that the standards can be used for continuous quality improvement. The standards can stimulate greater accomplishment and provide a level to which all public health systems can aspire to achieve. The standards are intended to support a process of quality improvement. System partners should use the assessment process and the performance standards results as a guide for learning about public health activities throughout the system and determining how to make improvements. The Local Public Health System Assessment is a valuable tool in identifying areas for system improvement, strengthening local partnerships, and assuring that a strong system is in place for effective response to day-to-day public health issues as well as public health emergencies. Local Public Health System Assessment instrument users at all levels report numerous such benefits, including:

- 1. Improves organizational and community communication and collaboration, by bringing partners to the same table.
- 2. Educates participants about public health and the interconnectedness of activities, which can lead to a higher appreciation and awareness of the many activities related to improving the public's health.
- 3. Strengthens the diverse network of partners within state and local public health systems, which can lead to more cohesion among partners, better coordination of activities and resources, and less duplication of services.
- 4. Identifies strengths and weaknesses to address in quality improvement efforts. Responses to the assessment can be tracked over time to identify system improvements or changes. Provides a benchmark for public health practice improvements, by providing a gold standard to which public health systems can aspire.

Summary of Green County performance scores by Essential Public Health Service (EPHS)

The summary above provides a quick overview of the system's performance in each of the 10 Essential Public Health Services (EPHS). Each EPHS score is a composite value determined by the scores given to those activities that contribute to each Essential Service. These scores range from a minimum value of 0% (no activity is performed pursuant to the standards) to a maximum of 100% (all activities associated with the standards are performed at optimal levels).

NDA* - No Data Available.

SOURCE: County Health Ranking, 2014 (all of the above), Percentage of total population

^{*}Each county ranking is compared among the 120 counties in Kentucky.

HEALTH OUTCOMES in the County Health Rankings represent how healthy a county is. We measure two types of health outcomes: how long people live (length of life) and how healthy people feel while alive (quality of life). LENGTH OF LIFE (Mortality) examine mortality (or death) data to find out how long people live. More specifically, we measure what are known as premature deaths (deaths before age 75).

QUALITY OF LIFE (Morbidity) refers to how healthy people feel while alive. Specifically, we report on the measures of their health-related quality of life (their overall health, physical health, and mental health) and we also look at birth outcomes (in this case, babies born with a low birthweight).

HEALTH FACTORS in the County Health Rankings represent what influences the health of a county. We measure four types of health factors: health behaviors, clinical care, social and economic, and physical environment factors. In turn, each of these factors is based on several measures. A fifth set of factors that influence health (genetics and biology) is not included in the Rankings.

1. Premature death - Years of potential life lost before age 75 per 100,000 population (age-adjusted)

- 2. Poor or fair health Percent of adults reporting fair or poor health (age-adjusted)
- 3. Poor physical health day Average number of physically unhealthy days reported in past 30 days (age-adjusted)
- Poor mental health day Average number of mentally unhealthy days reported in past 30 days (age-adjusted)
- 5. Low birth rate Low birth weight is the percent of live births for which the infant weighed less than 2,500 grams (approximately 5 lbs., 8 oz.).
- 6. Adult smoking Percentage of adults that report smoking more than 100 cigarettes
- 7. Adult obesity Percent of adults that report a BMI >= 30
- 8. Food environment index Index of factors that contribute to a healthy food environment
- 9. Physical inactivity percent of adults aged 20 and over reporting no leisure time physical activity
- Access to exercise opportunities percent of the population with adequate access to locations for physical activity
- 11. Excessive drinking Binge drinking or heavy drinking; binge drinking is consuming more than 4 (women) or 5 (men) alcoholic beverages on a single occasion. Heavy drinking is defined as drinking more than 1 (women) or 2 (men) per day over average

- 12. Alcohol-impaired driving Proportion of driving deaths with alcohol involvement
- 13. Uninsured Percentage of adults under age 65 without health insurance
- 14. Primary care physicians Ratio of population to primary care physicians
- 15. Dentist Ratio of population to dentists
- 16. Mental health providers Ration of population to mental health providers
- 17. Preventable hospital stays Hospitalization rate for ambulatory-care sensitive conditions per 1,000 Medicare enrollees
- 18. High school graduation Percent of ninth grade cohort that graduates in 4 years
- 19. Some college Percent of adults aged 25-44 years with some post-secondary education
- 20. Unemployment Percent of population age 16+ unemployed but seeking work
- 21. Children in poverty Percent of children under age 18 in poverty
- 22. Inadequate social support Percent of adults without social/emotional support
- 23. Children in single-parent households Percent of children that live in household headed by single parent
- 24. Violent crimes Violent crime rate per 100,000 population

25. Injury Deaths - Injury deaths is the death rate from intentional and unintentional injuries per 100,000 population. Deaths included are those with an underlying cause of injury (ICD-10 codes *U01-*U03, V01-Y36, Y85-Y87, Y89 continued on page 22
